Fake Scalp Wigs

The cap construction of this type of wig is similar to the construction of monofilament wigs. It is constructed with a fine layer of transparent micro-mesh which is inserted either at the parting, crown or the top area. Each strand of hair has been individually hand tied to the mesh, to mimic natural hair growth. The back is machine sewn with weft layers. The cap is light weighted and allows air ventilation to the scalp. The wig is made from real human hair, it looks and feels real. They need to be re-styled like real hair after washing and conditioning.
