## **Product Information**

### **Synthetic Wigs**

These wigs are great, because they are very easy to maintain. All you should do is wash the unit after about 30 wears, or every four weeks with the shampoo special formulated for the wig, towel blot and spray with a silicone conditioner, let it air dry and its ready to wear again! The conditioner should be use regularly to keep the wig soft and bring out the shine and flexibility of the fibre.

### **How to wash a synthetic wig**

Tips for washing your wig and keeping your wig looking beautiful much longer. Avoid stretching or damaging the cap. How to deal with tangles, matting, shedding and restoring shine.

### **Detangling**

Before washing, make sure to gently detangle the hair with your fingers or a wide tooth comb. Work your way from the ends to the roots to reduce shedding.

### **Rinsing**

Rinse from the roots to the end with lukewarm running water. Let the water flow from the roots to the ends of your hair.

### **Shampooing**

Put a walnut size amount of shampoo in your hand and work your way through the hair, in a downwards motion from the roots, to the tips of the hair. Rinse once the until the water runs clear. Blot out excess water with a towel. Avoid twisting or wring.

### **Conditioning**

Spray leave-in conditioner from the middle of the shaft to the ends, avoiding the roots or knots.

### **Drying**

Air dry on a wig stand, the wig will return to its original style.
